

Alien DVR RTSP Stream URLs

Alien DVRs generate RTSP video streams that you can access via software or via devices such as the IP-Handy Quad.

IP Handy Quad = RTSP to HDMI

Here is an example URL ..

```
rtsp://admin:12345@192.168.0.68:554/PSIA/Streaming/channels/101
```

This URL contains the following values:

- Username = admin
- Password = 12345
- IP Address = 191.168.0.68
- RTSP Port = 554

You should substitute your own values of username, password, IP address and port number.

The 101 at the end means ch1, main stream

You can change this to other values, such as ..

- 102 = ch1 sub-stream
- 401 = ch4 main stream
- 402 = ch4 sub stream

**** End of Document ****
